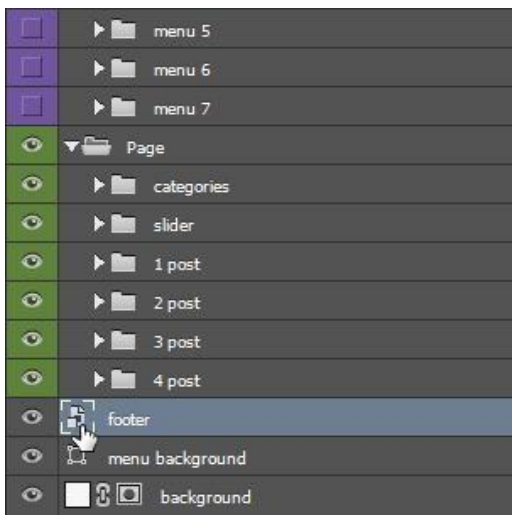
20_contacts.psd

HOW TO EDIT PSD FILE?

In order to edit the file, you need to have Adobe Photoshop CC installed on your system, and the fonts mentioned in the credits installed.
As you can see on attached picture, the layers are well organized and grouped into folders, which make editing very easy. So, all you have to do, is select the layer, and then edit it with Adobe Photoshop.
That's all! Enjoy.

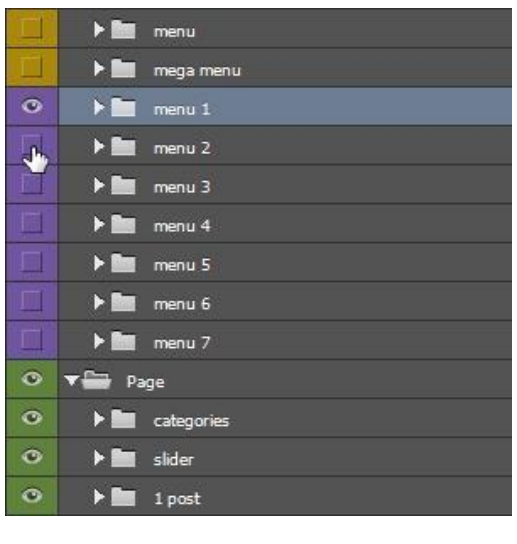
HOW TO EDIT THE CONTENT OF SMART OBJECTS?



1) Select the Smart Object from the Layers panel, and do one of the following:
Choose Layer > Smart Objects > Edit Contents.
Double-click the Smart Objects thumbnail in the Layers panel.
In the Properties panel, click Edit Contents.
1) Click OK to close the dialog box.
2) Make edits to the source content file, then choose File > Save.

Photoshop updates the Smart Object to reflect the changes you made. (If you don’t see the changes, make the Photoshop document containing the Smart Object active.)

EMPTY PSD FILES?



To save on upload capacity, I started conducting hide entire Groups when i save some new PSD Files.
How you can turn on Group and view all Layers?
It is super easy. You need to open Photoshop. Go to Windows > Layers (F7) to show the Layers Panel.
In The Layers Panel, Click The Eye Icon. You will turn on Groups of Layers.
Enjoy.
